Name: Thabisa Molwana

21 May 2018

The Risk Report focuses on the potential character blindspots (counter-productive tendencies) that potentially pose a risk to an organisation. The report serves as a general indication of risk potential based on economic crime research in the South African financial industry and seven dimensions relating to integrity at work. As no human is wholly virtuous, each person exposes an organisation to some extent of risk. Risk, however, is context specific.

A Financial Controller, for example, should be risk averse, yet a degree of risk-taking may be tolerated in a Strategic Leadership position. To inform your decision regarding the degree of acceptable risk, it is therefore advised to apply these risk indicators in relation to the organisation's risk culture, the given position's risk-tolerance and the rest of the behavioural information in this integrated report.

\* Note that when in the green zone, the particular factor in isolation does not pose a significant risk i.t.o. economic crime. A score of below 10 on any of the Key Factors in combination with one or more other below-average Key scores may however contribute towards a greater economic crime risk.

Name: Thabisa Molwana

21 May 2018

Thabiso scored below average on two of the four main risk-indicator scores.

Based on an orientation towards a subjective approach, Thabiso seems more likely than most to rationalise counterproductive behaviour in situations where the consequences thereof may potentially have a negative impact at work. Based on Thabiso's below-average level of optimism, it appears as though the individual's moral judgement may currently be clouded as a result of personal or work-related circumstances. Additional probing may confirm.

Subsequently, appropriate intervention may enhance Thabiso's judgement to a degree. Thabiso appears to prefer a big-picture approach to work. The individual may sometimes fail to remain focused when tasks require attention which can lead to occasional mistakes. Thabiso appears to prefer a light-hearted approach at work which may limit performance in a serious work-setting. Furthermore, Thabiso appears somewhat more likely than most others to engage in risk-taking or impulsive behaviour.

Thabiso's emotional-control appears to be lower than that of most others. This tendency may indicate that certain afore-mentioned behaviours of concern may be portrayed in an aggressive or uncontrolled manner which can enhance the degree of risk related to such behaviours.

Based on the particular combination of characteristics, the individual seems more likely than most others to portray behaviour related to high economic crime risk.
